## Atomic Number Equation Based on Larson's Triplets

## David Halprin

Where Z represents the Atomic Number, and $(\mathrm{a}, \mathrm{b}, \mathrm{c})$ is the number triplet representing the atoms:

$$
\begin{equation*}
Z+2=\frac{a(a-1)(2 \mathrm{a}-1)+b(b+1)(2 \mathrm{~b}+1)}{3}+c \tag{1}
\end{equation*}
$$

If $a=b$ then this reduces to

$$
\begin{equation*}
Z+2=\frac{2 \mathrm{~b}\left(2 \mathrm{~b}^{2}+1\right)}{3}+c \tag{2}
\end{equation*}
$$

If $\mathrm{a}=\mathrm{b}+1$ then it reduces to

$$
\begin{equation*}
Z+2=\frac{2 \mathrm{~b}(b+1)(2 \mathrm{~b}+1)}{3}+c \tag{3}
\end{equation*}
$$

| $\mathbf{a}=\mathbf{b}$ |  | $\mathbf{a}=\mathbf{b}+1$ |  | Range of $\mathbf{c}$ | Z | Range of $\mathbf{Z}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| a | b | a | b |  |  |  |
|  |  | 2 | 1 | -1 to 4 | c +2 | 1 to 6 |
| 2 | 2 |  |  | -4 to 4 | c +10 | 6 to 14 |
|  |  | 3 | 2 | -4 to 9 | c +18 | 14 to 27 |
| 3 | 3 |  |  | -8 to 9 | c +36 | 28 to 45 |
|  |  | 4 | 3 | -8 to 16 | c + 54 | 46 to 70 |
| 4 | 4 |  |  | -15 to 16 | c + 86 | 71 to 102 |
|  |  | 5 | 4 | -15 to -1 | c +118 | 103 to 117 |

Equation (1) is exactly representative of Dewey's algorithm.
Equations (2) and (3) are just simplifications of Equation (1) when $\mathrm{a}=\mathrm{b}$ and $\mathrm{a}=\mathrm{b}+1$ respectively.
Some specific examples:
Larsonium ${ }^{1}$ 5-4-(1) substituted into Equation (3) gives $Z=117$ as expected, however there is an interesting aside to consider, despite its counter-intuitive appearance and it requires some interpretation within RS too.

[^0]| Atom / <br> Particle | Atomic Number |  |
| :---: | :---: | :---: |
|  | a-b-c | $\mathbf{Z}$ |
|  | $0-0-(1)$ | -3 |
| Electron | $1-0-(1)$ | -3 |
| Rotational base | $1-0-0$ | -2 |
|  | $0-0-0$ | -2 |
|  | $0-0-1$ | -1 |
| Positron | $1-0-1$ | -1 |
| Neutrino | $1-1-(1)$ | -1 |
| Neutron | $1-1-0$ | 0 |
| Deuteron | $1-1-0$ | 0 |
| Alpha Particle | $1-1-0$ | 0 |
| Deuterium | $1-1-1$ | 1 |

[^0]:    1 Not an "official" name for the element; also identified as Farnsium in Futurama episode, "Near-Death Wish."
